# Nasr Mohamed Nasr Abdelglil

**Junior Full Stack .NET Developer**

6th of October, Giza, Egypt | +20 100 811 3554 | naiw991uen@gmail.com
LinkedIn: linkedin.com/in/nasr-mohamed-dev | GitHub: github.com/naiw991uen-collab

## PROFESSIONAL SUMMARY

Junior Full Stack .NET Developer who builds and deploys web applications with C#, ASP.NET Core MVC, ASP.NET Core Web API, Entity Framework Core and SQL Server / SQLite, plus Angular frontends that consume REST APIs. Built and deployed LevelUp, a PlayStation lounge management system with per-minute billing, and a Gym Management System with a real-time SignalR dashboard, both using 3-layer architecture, the Repository and Unit of Work patterns and ASP.NET Core Identity. Fourth-year Software student who writes clean, maintainable code and learns quickly.

## TECHNICAL SKILLS

**Languages:** C#, TypeScript, JavaScript, SQL, HTML5, CSS3

**Backend:** .NET 9, ASP.NET Core MVC, ASP.NET Core Web API, RESTful APIs, JSON, Entity Framework Core (EF Core), LINQ, ASP.NET Core Identity, Razor Views, SignalR, AutoMapper, FluentValidation, Serilog, Scrutor

**Architecture:** 3-Layer Architecture, Repository Pattern, Unit of Work, Dependency Injection, Result Pattern, Role-Based Authorization, OOP

**Frontend:** Angular, RxJS, Signals, Reactive Forms, Route Guards, Bootstrap, Responsive Design, RTL Layouts

**Databases:** SQL Server, SQLite, Relational Database Design, EF Core Migrations, Data Seeding

**Tools:** Git, GitHub, GitHub Pages, Visual Studio, VS Code, IIS Deployment (Web Deploy), Karma, Jasmine

## PROJECTS

### LevelUp - PlayStation Lounge Management System

**Live Demo:** levelup-ps.runasp.net **| GitHub:** github.com/naiw991uen-collab/LevelUp

**Technologies:** *ASP.NET Core MVC, .NET 9, C#, Entity Framework Core, SQLite, ASP.NET Core Identity, Serilog*

- Built and deployed a cashier system for a PlayStation lounge to manage rooms, game sessions, drinks, billing and daily income reports.
- Implemented per-minute billing per session segment with rate snapshots, accurately billing mode switches, pauses and rate changes.
- Designed a 3-layer architecture with generic and specific repositories, Unit of Work, a Result pattern and Scrutor-based DI.
- Built a live devices board with session timers, itemized bills, a filterable sessions log and Single/Multi dashboards per room.
- Deployed to IIS (MonsterASP.NET) via Web Deploy and as a self-contained single-file executable that runs offline from USB.

### Gym Management System

**Live Demo:** gym-nasr.runasp.net **| GitHub:** github.com/naiw991uen-collab/GymManagmentSystem

**Technologies:** *ASP.NET Core MVC, .NET 9, C#, Entity Framework Core, SQL Server, SignalR, ASP.NET Core Identity, FluentValidation*

- Built a gym administration platform (members, plans, trainers, sessions, bookings, attendance) on a 3-layer architecture with Repository, Unit of Work, AutoMapper and a Result pattern.
- Implemented a real-time analytics dashboard with SignalR and secured the app with ASP.NET Core Identity and role-based authorization (SuperAdmin, Admin).
- Added FluentValidation, Serilog structured logging, automatic migrations, data seeding and secure image uploads (file type and 5 MB size checks, GUID file names); deployed to IIS (MonsterASP.NET).

### CatHub - Product Categories Store

**Live Demo:** naiw991uen-collab.github.io/catigories **| GitHub:** github.com/naiw991uen-collab/catigories

**Technologies:** *Angular 20, TypeScript, RxJS, Bootstrap 5, Karma, Jasmine*

- Built an e-commerce storefront on a REST API with login, category browsing, product details and a cart persisted in localStorage.
- Used standalone components, signals, reactive forms, CanActivate route guards and a shared HttpClient service with loading/error states; tested with Karma/Jasmine.

### Recipes - Meals Explorer

**Live Demo:** naiw991uen-collab.github.io/meals **| GitHub:** github.com/naiw991uen-collab/meals

**Technologies:** *Angular 20, TypeScript, RxJS, Bootstrap*

- Built a recipe app with authentication, meal filtering (Breakfast, Lunch, Dinner), a recipes grid, a preview modal and detailed recipe pages, using route guards and signals-based state; deployed to GitHub Pages.

## EDUCATION

**Bachelor of Science in Software** | October Technological University | Expected Graduation: 2027
Faculty of Industrial and Energy Technology, Department of Information Technology (Fourth-Year Student)

## COURSES AND TRAINING

ASP.NET Core MVC (Completed) | ASP.NET Core Web API (In Progress, building an e-commerce Web API) | Frontend Development with Angular, Professional Course (AUC)

## LANGUAGES

Arabic: Native | English: B1 (AUC Certificate) | German: B1 (Goethe-Institut Certificate)
